“Solving Collective Action Problems under Separated and Shared Powers: The Benefits of Consolidating Executive Budgetary Powers, 1895-1940” (George A. Krause)

NOTE 1: The SI section statistical analyses employ the data file created & saved at the end of executing the manuscript statistical analyses [i.e., *execbudinfluence.08-26-2020.REPORTED MODELS.dta*] since it contains variables generated from the *execbudinfluence.08-26-2020.REPORTED MODELS.REV.comments.do* Stata program code used to execute the statistical analyses for the manuscript document.

NOTE 2: In some instances, the Stata internal command function performs the operation opposite of the stated direction based on the coding of binary indicators. These instances are *neither* coding *nor* transcription errors. The appropriate single-tailed hypothesis test is used as the basis for p-values depicted in such tables. These include the following instances where the ‘sign flips’ between the Stata output and what is reported and interpreted in either the manuscript and Supporting Information document.

IV. OVERVIEW OF STATA GRAPHICS FILES [FIGURES 1-3]

Each Stata output (*.smcl) file corresponds to a Stata program (*.do) file and Stata database (*.dta) file for the following Sets of Statistical Analyses in **FIGURES 1, 2 & 3** in the *Manuscript* Document:

- ***Figure 1 Data.02-20-2020.dta***
- ***Figure 2 Data.02-20-2020.dta***
- ***Figure 3 Data.02-21-2020.dta***
- ***execbudinfluence.08-26-2020.FIGURES 1-3.03-11-2021.do*** [Stata Program Code files Used to Generate “BASIC” Figures as Graphics Files (*.gph) that are subsequently ‘manually’ refined using the Stata Graph Editor function for formatting purposes.

- ***execbudinfluence.03-11-2021.FIGURES 1-3.smcl*** [Stata Output files that Executes the Program that Generates the “**BASIC**” Figures as Graphics Files (***.gph**) that are subsequently ‘manually’ refined using the Stata Graph Editor function for formatting purposes.
